- **Operating System**
Linux and Windows
- **Git/Github, Docker, AWS, Kubernete**

soft skills

- Team work
- Profound leadership skill
- Collaboration
- soundcommunication skill

Language

English

Nkwuda Theophilus

FullStack Developer

A creative and skilled software engineer looking to apply tried-and-true abilities to satisfy company objectives. I have a strong background in back-end development and strong leadership and teamwork abilities. One of my key concerns is making a trustworthy, security-conscious product. Express.js and React.js are among the tools I enjoy using as a support for my primary programming language, javascript..

Experience

Nov,2021 - Jan,2022

Upwork | freelance

Backend developer

- I work with a team of product designers, front-end developers, and content writers to develop a school management website and I made a 30% impact on our work strategy by making sure I deliver my work on time as well as other engineers.
- I managed the development of an API that handles various CRUD operations and as well in charge of the integration of various external APIs thereby reducing the work and time required for the speedy development of the project by 50%.
- I collaborated with the team and restructured communication flow among the different sections of the project and cut down bureaucracy and time by 75%..

projects

may 2023- jun 2023

House booking platform [spacee]

- the platform eases the inconveniences incurred by travelers around the globe by providing a platform for renting an accommodation before your arrival to your destination.
- I put my technical expertise from my classes in node.js, react.js, express.js, tailwindcss, and Mongodb to use through this personal project.
- I utilized npm and git/github in managing the various dependencies used by the app and git for controlling the various version of the app during development

jun 2022 - july 2023

Video streaming App [Vldme]

- I Developed this amazing App utilizing the MVC design pattern using Express.js, React.js, MongoDB and Node.js as runtime environment, and I kept my code legible and compliant with industry standards by adhering to the SOLID concept.
- I used JWT API services to implement the authorization and authentication of various endpoints.
- I tested and documented the API with the postman client
- It helped me in understanding the need for writing maintainable and readable codes for my project thereby increasing the efficiency and complexity of my codes.
